

Science from Scientists

Project Description

Science from Scientists (SfS) – sends real, charismatic scientists into classrooms during the school day every other week throughout the year to teach hands-on, frameworks-relevant STEM lessons to students in grades 4-8. The goals of the SfS program are to improve student attitudes and aptitudes in STEM (evaluated by student performance on the STE MCAS and pre- and post- quizzes throughout the year) and to support classroom teachers through a free Professional Development Program designed to build on SfS classroom visits. SfS serves over 3000 students in 29 schools in Massachusetts and the Bay Area, California.
