

2-to-4 Year Transfer Summer Bridge

Are you a STEM student transferring to Bridgewater State University?

You are encouraged to apply for this free, transfer bridge program available to all Massachusetts community college students intended to protect against “transfer shock.”

Program Overview:

Summer Bridge participants will come to the Bridgewater campus twice – July 8-10 and August 7-9. During these on campus visits, participants stay in on-campus housing, eat in the cafeteria, and receive academic advising and access to academic resources such as financial aid and scholarship guidance, health services, and employment. Participants will be introduced undergraduate research opportunities and attend the ATP Summer Symposium where results from summer research projects are presented. In addition, participants will be enrolled in a online summer course required for graduation: Phil 111 Foundations of Logic and Reasoning (3 credits) as well as the Fall 2019 STEM-specific Living and Learning Community: NSCI 150 - Living in the Natural World (1 credit) designed to help both first-year and transfer students succeed. Students who complete the Summer Bridge Program will receive a \$450 stipend.

Eligibility Requirements:

- Applicants must be accepted to Bridgewater State University as a STEM major for the Fall 2019 semester
- Must be able to attend two three-day on-campus sessions at BSU
